## INTRODUCTION

MyEtherWallet is an open-source and free interface for generating and managing Ethereum wallets. It can also be used to send and manage transactions to the Ethereum blockchain.

The url to access MyEtherWallet is:

<https://www.myetherwallet.com/>

This document is just a guide to how to use MyEtherWallet but we highly recommend that you do your own research and due diligence when setting up your wallets.

**Always backup your keys:** MyEtherWallet.com wallets are not "web wallets". You do not create an account or give them your funds to hold onto. No data leaves your computer or your browser. We make it easy for you to create, save, and access your information and interact with the blockchain.

**We are not responsible for any loss:** Ethereum and MyEtherWallet.com, and some of the underlying Javascript libraries that are used by MyEtherWallet are under active development. While the system has been thoroughly tested and tens of thousands of wallets have been successfully created by people all over the globe, there is always the possibility something unexpected happens that causes your funds to be lost. Please do not invest more than you are willing to lose, and please be careful.

For the terms and conditions concerning EARTH Token, please visit this page: <https://earth-token.com/pdf/Earth-Token-Sale-Terms&Conditions.pdf>

For additional questions and inquiries about the process, please contact us through one of the following channels:

Twitter: <https://twitter.com/earthtokens>

## CREATING A NEW WALLET

If you already have an existing MyEtherWallet wallet, you can skip this step.

- Using your browser, go to the MyEtherWallet URL: <https://www.myetherwallet.com/>. Make ensure that you clearly see the padlock and the “MYETHERWALLET LLC [US]” secure site certificate in the browser’s navigation bar.

- Click on the “New Wallet” tab, and in the “Enter a password” field, enter in a strong password (a long password with upper-case, lower-case letters, special characters and numbers) that will be used to access your wallet. The password is absolutely critical in being able to access your ETH and EARTH tokens from the wallet so it is important to remember the password.

### Create New Wallet

**Enter a password**

👁️

[Create New Wallet](#)

This password *encrypts* your private key. This does not act as a seed to generate your keys. **You will need this password + your private key to unlock your wallet.**

[How to Create a Wallet](#) · [Getting Started](#)

## BACKUP KEYSTORE FILE

Once your wallet has been created, click on “Download Keystore File (UTC/JSON)”. The keystore file contains the private and public keys for the wallet that you have created, so it is very important that you store it in a safe place. You will then be asked to choose a place to save the keystore file. Please remember that losing the keystore file means that you will lose all your ETH and EARTH tokens stored in your account.

Save your **Keystore** File.

Download Keystore File (UTC / JSON)

**\*\*Do not lose it!\*\*** It cannot be recovered if you lose it.

**\*\*Do not share it!\*\*** Your funds will be stolen if you use this file on a malicious/phishing site.

**\*\*Make a backup!\*\*** Secure it like the millions of dollars it may one day be worth.

I understand. Continue.

## SAVING YOUR PRIVATE KEY

The private key allows you to access your account from other Ethereum wallets. With this private key or private key file, you will be able to access to your Ethereum wallet account without the need of the password. Please safeguard and protect this private key or private key file by all means necessary.

Save Your **Private Key**.

```

## ACCESSING WALLET AND MAKING TRANSACTIONS

Head over to the 'Send Ether & Tokens' menu and choose Keystore / JSON File on your left. You will then need to upload the keystore file that you downloaded earlier and enter the password that you used earlier. Then, click on the 'Unlock' button.

### How would you like to access your wallet?

- View w/ Address Only
- MetaMask / Mist
- Ledger Wallet
- TREZOR
- Digital Bitbox
- Keystore / JSON File [?](#)
- Mnemonic Phrase [?](#)
- Private Key [?](#)
- Parity Phrase [?](#)

### Select Your Wallet File

**⚠ This is not a recommended way to access your wallet.**

Entering your private key on a website dangerous. If our website is compromised or you accidentally visit a different website, your funds will be stolen. Please consider:

- [MetaMask or A Hardware Wallet or Running MEW Offline & Locally](#)
- [Learning How to Protect Yourself and Your Funds](#)

If you must, please double-check the URL & SSL cert. It should say <https://www.myetherwallet.com> & [MYETHERWALLET.LLC](#) in your URL bar.

SELECT WALLET FILE...

Your wallet is encrypted. Good! Please enter the password.

.....

Unlock

If you used the right password, you should be able to see the following screen, which will allow you to send ether.

**To Address**

0xDECAF9CD2367cdbb726E904cD6397eDFcAe6068D

**Amount to Send**
